Key Insights & Recommendations

Key Findings

1. Revenue is seasonal and volume-driven

Revenue peaks in spring/summer and declines in winter. Despite overall growth, 2014 saw a decline, while revenue remains strongly linked to units sold.

2. Pittsburgh Mountain Machines leads store performance

Pittsburgh Mountain Machines generated the highest revenue (\$8.9M over 2011–2015). In 2015, Dallas Cycles recorded the largest YoY increase (+\$294K), while Tampa 29ers saw the sharpest decline (-\$76.5K; -95.4%).

3. Mountain Bikes drive revenue

Mountain Bikes generated \$9.6M in 2015 and \$39M over 2011–2015. Cross Country Race was the leading subcategory, generating \$4.9M in 2015.

4. Price matters alongside volume

The Top 10 models by revenue and units sold show limited overlap, indicating that both **sales volume and product price** contribute to revenue performance.

Recommendations

1. Focus on high-performing segments

Prioritise Mountain Bikes and Cross Country Race in inventory and merchandising planning.

2. Investigate store-level outliers

Review the drivers of Tampa 29ers' sharp decline and Dallas Cycles' strong growth, focusing on product mix, pricing and inventory.

3. Align planning with seasonality

Adjust inventory and promotional planning to capture the spring/summer demand peak and manage the winter slowdown.
